

# The Solar System

Our solar system consists of the Sun and the objects that orbit it, including planets, moons, asteroids, and comets.

## Key Points:

- › The Sun is the center of the solar system.
- › There are eight major planets: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune.
- › Earth is the third planet from the Sun and the only known planet to support life.
- › Jupiter is the largest planet in the solar system.
- › The asteroid belt lies between Mars and Jupiter.

## Facts:

- › The Sun contains more than 99% of the mass of the solar system.
- › Saturn is famous for its prominent ring system.
- › Neptune was the first planet located through mathematical predictions.

You can ask questions like: 'Which planet is the largest?', 'What is the asteroid belt?', or 'How many planets are there?'
